Hypothetical backtest: BTC carry, KRW hedged class

Market-neutral bitcoin carry: long spot BTC held at a custodian, short USDT-margined perpetuals on Binance and Bybit at 2x. Simulated on public data with assumed fees.

Period 2021-01-01 to 2026-09-30 | NAV and returns in KRW, after assumed fees | daily valuation at 17:00 UTC

Annualised return	Volatility (daily, annualised)	Sharpe vs KRW 3-month rate (95% interval)
+4.3%	**1.0%**	**0.25 (−0.3 to 0.8)**
Max drawdown	**Positive months**	**Beta to BTC (master, daily)**
−1.4%	**70%**	**0.00**

Monthly returns in KRW (after fees)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year
2021	+3.3	+4.6	+2.1	+2.9	+1.3	−0.2	−0.2	+0.6	+0.4	+1.3	+1.4	+0.4	**+19.5**
2022	+0.3	0.0	+0.2	+0.2	+0.1	+0.1	+0.4	+0.1	+0.1	+0.2	−0.4	0.0	**+1.2**
2023	+0.3	+0.3	+0.1	+0.1	+0.1	+0.1	+0.1	+0.1	−0.1	0.0	+0.4	+0.7	**+2.1**
2024	+0.5	+0.5	+1.5	+0.2	+0.1	0.0	+0.2	−0.1	−0.1	+0.1	+0.7	+0.3	**+3.8**
2025	+0.3	−0.1	−0.1	−0.1	0.0	−0.1	+0.2	+0.1	+0.1	−0.1	0.0	−0.2	**+0.1**
2026	0.0	−0.1	−0.4	−0.2	−0.2	−0.1	+0.2	+0.2	+0.1				**−0.5**

Assumed terms

Class currency	KRW
Currency treatment	USD sold forward for KRW each month (1-month forward, SOFR and the KRW 3-month rate).
Fees (assumed)	1.5% management a year; 20% performance above a high-water mark, crystallised quarterly
Fees paid	2.51% of assets a year
Before fees	+7.0% a year (−0.6% vs the USD class)
Risk-free rate	KRW 3-month rate

Strategy and risks

Master, before fees: 7.7% a year since Jan 2021; worst day −0.16% (2022-11-10); worst drawdown −0.6%.

Leverage 2x on the short leg, a trade-off chosen in-sample: modelled annual liquidation probability 1.1% (target margin) to 3.9% (band edge) with a 4h top-up, above a 1% reference level; the band-edge figure rests on the fitted tail. At 1x the master earned 5.8% a year before fees, against 7.7%.

Venue risk: about 33% of master NAV sits as margin at two exchanges. Had one failed on FTX's petition date with FTX's class 5A recovery, this class would have lost 3.0% of NAV.

The carry moves in regimes: the master earned less than USD cash (SOFR) in 2025 and 2026 (to Sep).

All share classes, after fees

Class	Return	Volatility	Sharpe	Max drawdown	Fees paid	Before fees
USDT (in USDT)	+4.9%	0.8%	0.23	−0.7%	2.61%	+7.7%
USD (in USD)	+4.9%	1.0%	0.22	−0.7%	2.61%	+7.7%
JPY hedged (in JPY)	+2.1%	1.0%	0.31	−5.4%	2.22%	+4.4%
KRW hedged (in KRW)	**+4.3%**	**1.0%**	**0.25**	**−1.4%**	**2.51%**	**+7.0%**
BTC hedged (in BTC)	−7.1%	2.0%	−1.84	−34.6%	1.50%	−5.7%

Sharpe ratios: monthly excess returns over each class's own short rate (zero for BTC), annualised allowing for their autocorrelation (Lo 2002), so they are not return divided by the daily volatility shown. Volatility: daily returns annualised.

Hypothetical backtest on public data with assumed fees and costs. It is not a fund, a track record, an offer or a solicitation, and it does not describe any firm's products or terms. Past and simulated returns do not predict future returns. Legal, tax and regulatory feasibility is not assessed.
